- Water Supply, Transfer and Waste Water Cleaning
- Revitalization
- Water use
- Danube
- Pollution
- **Landscape management and adaptation**
- Fisheries
- Institutions and governance structures

Landscape Management and Adaptation

Apply integrated management

Support the water retention

Manage sediment connectivity and delivery

Protect inundation areas and flood risks areas

Apply mixture of climate-proofed measures for flood protection

Different spatial and temporal scales

Cross-sectoral dialogue

Consider trends of environmental change

Capacity building

Immediate action
