

- Project name: **AIMS – Development and testing of a shared, AI-based predictive model for a coordinated use of big data and for a joint Monitoring System of landslides risk in the Adriatic-Ionian region**

- Project logo:   

- Organisation: RESOURCE ENVIRONMENTAL CENTER BIH (REC BIH)

- Representative: Lejla Šuman, Director

- Activities/Outcomes /Highlights of the project:

- ❖ Development of Joint Strategy for a shared ADRIION approach on landslides monitoring and early prediction;
- ❖ Investigation of common challenges and suitable technologies for effective predictive models;
- ❖ Development of AI-based landslides monitoring and early prediction System applicable to different morphological contexts of the macro-region;
- ❖ Conduct transnational pilot testing aimed to collect and aggregate data from 6 designated sites of geological interest;
- ❖ Capacity building and knowledge transfer for the uptake of the developed monitoring and early prediction system.
